

How to transfer photos off your camera's SD Memory Card and on to your computer

1. Find the SD memory card reader on your computer. Make sure you put the memory card in the correct slot to prevent damage to memory card and loss of pictures.
2. After plugging in your card, a screen should come up similar to this:

3. Select '**Open folder to view files**' and select the pictures you want to download. You can download one picture or all of them.
4. Save your pictures in a new folder on your computer.
5. When you are finished transferring your photos from the card to the computer, be sure to double click '**Safely Remove Hardware**', Stop, and then OK. You will find the '**Safely Remove Hardware**' option on the bottom right side of your screen (but the date/time).
